JENKINS ELECTRIC Welcomes Industry Veteran Billy Johns with Distribution Expansion

Charlotte-based Jenkins Electric welcomes Electromechanical Industry Veteran and former EASA Southeastern Chapter President Billy Johns.

CHARLOTTE, N.C. – Jenkins Electric Company welcomes industry veteran Billy Johns to its outside sales team. Bringing decades of experience as an industry leader Billy will be a key team member responsible for continuing the company's 115-year legacy.

"Jenkins is built on the reliability and knowledge of our employees, and we are proud to welcome industry leader Billy Johns to our team. Billy's long history in the electromechanical repair and service industry is a natural fit at Jenkins. We are excited about the value Billy adds to our team and what his experience means for our continued growth and success in the industry." says Iain Jenkins, President of Jenkins Electric

As a founding member of NISA, the organization that was renamed EASA, Jenkins supports the electromechanical industry by remaining committed to serving fellow motor shops through technical support, testing and repair services, motor cooling fan replacement, parts remanufacturing and with an expanding distribution offering. Billy will continue to be a critical resource for motor shops across the Southeast in his new role.

About Billy Johns: Billy began his career in the electric motor industry in 1978 as a utility helper. In the following years, he worked as a mechanic, and AC & DC coil maker, with his primary skill set as a winder of large motors in the shop and in the field. Over the last twenty years, Billy moved into sales and customer service. Billy has previously worked for both motor manufacturers and repair shops across the industry. Billy has served on the EASA Southeastern Chapter Board of Directors since 2016 and as chapter president from April 2020 - October 2021. In addition, Billy has served on the EASA International Marketing & Industry Awareness Committee.

About Jenkins Electric Company: Jenkins Electric is a Charlotte, NC-based industrial, electromechanical repair, test, and manufacturing company. Their manufactured test systems, manufactured and distributed products support repair facilities and maintenance departments throughout the world, while their repair services keep OEMs and utilities across the southeast running.
